"As a dedicated web developer, I specialize in creating responsive, user-friendly websites with a strong focus on front-end development. I have extensive experience working with HTML, CSS, JavaScript, and Bootstrap to design visually appealing and functional interfaces. My expertise extends to back-end technologies like PHP and MySQL, enabling me to build dynamic, database-driven websites. I am passionate about delivering high-quality solutions that meet client needs while ensuring excellent user experience and site performance."

PERSONAL PROJECTS

The Cake Shop (http://eatingcake.netlify.app) (03/2024 - 04/2024) I created The Cake Shop website using HTML, CSS, ES6, and Bootstrap to achieve a modern and responsive design. It showcases cakes with a sleek layout, interactive features, and smooth navigation, enhanced by Bootstrap's grid and components for a polished user experience

MovieNite (03/2024 - 03/2024) I developed a Movie Management System that allows users to manage and book movies effortlessly. The system features an admin panel for adding movies, showtimes, and handling user bookings, with fields such as Title, Release Date, Rating, and Show Date & Time. The platform supports real-time data management, pagination for browsing movies, and a stylish design for both admin and user interfaces.

ExpenseVoyage (https://expensevoyage.freewebhostmost.com/) (09/2024 - 09/2024) The "Expense Voyage" website is a travel and tour booking platform showcasing various destinations, activities, and travel packages. It features options to explore beautiful places worldwide, personalized trips, and travel-related services such as booking types, durations, and guest preferences. The website also highlights client reviews, top destinations, a blog section, and company information.

SKILLS

Html   Css   Java Script   ES6

Advance JS   Advance PHP

CSS Frameworks (Bootstrap, Tailwind)   SEO
